DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to a photomask, classified in class 430 subclass 5 (claims 1-5) and an exposure apparatus, classified in class 355 subclass 18 (claim 6).
- II. Claims 7-11, drawn to a method (process) of using an exposure apparatus to form a dot pattern, classified in class 355 subclass 77.
- III. Claim 12, drawn to a patterned device, classified in class 428 subclass 195.1.

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed in Group I can be used to practice another and materially different process than that claimed in Group II, such as a method of using the photomask and apparatus of Group I as a contact printing apparatus for contact patterned exposure of a photoresist exposure target.

Inventions II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the process as claimed in Group II can be used to make another and materially different product than that claimed in Group III, such as a structure made using a contact printing apparatus for contact patterned exposure of a photoresist exposure target (in which the resulting pattern of the structure

Art Unit: 1756

would be expected to be smaller than that of the device as claimed in Group III, because the patterned photomask would be closer to and in contact with a photoresist exposure target, rather than being spaced apart from the exposure target for making the device as claimed in Group III).

Inventions I and III are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case, the patterned device product as claimed in Group III can be made by another and materially different apparatus than the photomask and exposure apparatus claimed in Group I, such as a phase shift photomask having a dot pattern and a projection exposure apparatus having an appropriate exposure reduction ratio to form the patterned device product.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and also because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

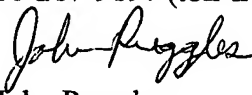

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even if the requirement is traversed (37 CFR 1.143).
